John Carlo Roa

Work Experience

JLCG (2018-2019)

Position: Unity Developer

- Integrated specialized hardware including AR and Kinect sensors within Unity to create immersive, motion-controlled user experiences.
- Developed a custom Event Registration System featuring automated data processing and direct-to-hardware ID card printing functionality.

ALORICA (2019-2020)

Position: Customer Service Representative

- Managed high-volume customer inquiries regarding credit card accounts, including billing discrepancies, payment processing, and reward program management.
- Acted as a first responder for security concerns, efficiently handling reports of lost/stolen cards and identifying potential fraudulent activity to protect client assets.

NTEK (April 2021 - Current)

Position: Unity Developer / Lead Developer

- Led the development of cross-platform multiplayer titles (PC/Android/iOS) using Photon, including a specialized NFT-integrated project.
- Designed and developed single-player educational games for international school clients (Korea), focusing on optimized mobile performance for Android.
- Developed a VR educational experience for Mindanao State University (MSU) utilizing Mirror for low-latency LAN multiplayer functionality.
- Optimized game delivery by implementing Unity Addressables for efficient DLC management and modular content updates.

FREELANCE (January 2026 - Current)

Position: .Net EF Core/Flutter Devs

- Created sample databases for Unity projects using .NET EF Core to test functionalities before handover to the backend team.
- Developed databases using .NET EF Core for Flutter projects I worked on.
- Hosted databases on Microsoft Azure for short-term use and testing.
- Built cross-platform, responsive applications using Flutter
