Work Experience

NTEK (April 2021 - June 2026)

Position: Lead Developer

- Led the development of cross-platform multiplayer titles (PC/Android/iOS) using Photon and Mirror, including a specialized NFT-integrated project.
- Designed and developed single-player educational games for international school clients (Korea), focusing on optimized mobile performance for Android.
- Developed a VR educational experience for Mindanao State University (MSU) utilizing Mirror for low-latency LAN multiplayer functionality.
- Optimized game delivery by implementing Unity Addressables for efficient DLC management and modular content updates.
- Developed Metaverse applications with AI Integrations so player can talk to NPC or their pets.
- Assisting Backend Team developing Rest API using .Net Core

ALORICA (September 2019- February 2021)

Position: Customer Service Representative

- Managed high-volume customer inquiries regarding credit card accounts, including billing discrepancies, payment processing, and reward program management.
- Acted as a first responder for security concerns, efficiently handling reports of lost/stolen cards and identifying potential fraudulent activity to protect client assets.

JLCG (March 2018- August 2019)

Position: Unity Developer

- Integrated specialized hardware including AR and Kinect sensors within Unity to create immersive, motion-controlled user experiences.
- Developed a custom Event Registration System featuring automated data processing and direct-to-hardware ID card printing functionality.
